

The classic  
exterior film.

Unique diversity, proven quality.  
**RENOLIT EXOFOL MX.**

*Rely on it.*

## RENOLIT EXOFOL MX. State of the art is our standard.

The classic that shows its class.

If you are thinking of refined profiles for windows and entrance doors, you will think of the classic: **RENOLIT EXOFOL MX**. For 30 years, the high-performance film has represented fascinating colours,

woodgrains and surface structures. **RENOLIT EXOFOL MX** turns any surface in the exterior area into a sight.

To complete the product offer, **RENOLIT EXOFOL MT** is a matching thermoformable film for vacuum forming door and in-fill panels. Again: state of the art is always our standard.

## Why be satisfied with a large selection if you can have the largest?

Maximum selection for maximum options.

RENOLIT EXOFOL MX gives profiles an individual profile. The classic among the high-performance films stands for an unparalleled, reliably high quality and large diversity of colours, woodgrains and embossing. The entire stock range includes more than 70 films. All in all, far in excess of 100 versions have been produced up to now. You won't find a greater selection of decorative films for exterior applications and more design options anywhere.

Looking good without any great effort.

RENOLIT EXOFOL MX has a high aesthetic effect. The care effort is very low: Even a single cleaning per year with detergent and water, using a sponge or a soft brush, will be sufficient to maintain the beautiful look across the entire film service life.

Design freedom is not limited at all with the comprehensive colour and woodgrain range.

# Solar Shield Technology (SST).

## Because permanent beauty must be protected.

SST – takes away the sun's strength.

What keeps profiles in shape and windows and doors tight?

Our Solar Shield Technology (SST) does! It acts like a protective shield against the sun. The ageing process of films and building components is decelerated. The energy efficiency of doors and windows is improved.

Infrared radiation from the sun is reflected by SST. This results in cooler profiles and many other benefits.

### Long-term protection for colours and woodgrains.

The pigments in the pigmented base film clearly reduce the infrared radiation and heat build-up in the profile. SST is sun protection of the most effective type.

The transparent upper layer consists of polymethylmethacrylate (PMMA) and absorbs more than 95 % of the UV-radiation. With a long-term effect. The colours and woodgrains are protected from fading and other weather effects.

# Guaranteeing a long service life.

Is pretty, will stay pretty.

RENOLIT EXOFOL MX not only promises longevity and quality. The high-performance film warrants it. For up to 10 years, depending on climate and weather zone.

Here is an overview of the warranty period in the different country groups.

Country group	1	2	3	4	* in years
